

# INSTRUCTIONS FOR USE BYE WART!

## Bye wart!

- PAIN FREE TREATMENT
- NATURAL INGREDIENTS

## Bye wart!

For the external treatment of warts.

## Use

Bye wart! is a medical remedy using natural substances for the external treatment of warts (and verrucas).

## What is bye wart! and how is the product used?

Bye wart! is a cream for treating various types of wart and verrucas. Verrucas are caused by viruses (Poxviruses) that are different to the viruses that cause normal warts. Bye wart! works in a variety of ways and its active agents are based on natural ingredients. Treatment is effective and pain-free. Bye wart! places a protective film over the wart and protects it from negative external influences. It also stimulates healing.

## Warts

Depending on age and living conditions, between 10 and 25% of the population have to deal with warts. In some countries this percentage rises to above 50%. Warts are benign skin tumours that can take a range of forms. A wart usually has a rough surface. Warts are caused by infection by the papilloma virus. Warts can be very contagious and can easily be passed onto others or can cause warts on other parts of the body. Whether or not a wart is actually formed after infection with the papilloma virus depends on the extent of contagion of the virus and the person's immune system. The more effective the immune system, the smaller the chance of a wart forming. Careful bodily hygiene is very important for successful wart treatment. Never, for example, walk around barefoot in swimming pools or saunas. It is also very important to always dry toes and fingers carefully. If you have a problem with warts it is recommended that towels and flannels that have been used are washed at a high temperature or disposable varieties are used. Never share a towel with someone who has warts. Ensure that you do not touch any other body part when applying the cream in order to prevent further infection.

## When should Bye wart! not be used?

Do not use Bye wart! if you are sensitive to any of the constituents or if you are pregnant or breastfeeding. Do not use on children younger than three.

## Instructions for safe use

It is important that these instructions are followed carefully.

- Bye wart! is only intended for external use.
- If the product is used correctly, no particular precautionary measures need to be taken.
- Avoid contact with the eyes, mucous membrane and genitals!
- Wash hands thoroughly after use!
- In order to reduce the chance of spreading, never use a pack of Bye wart! that has been opened/used by someone else!
- Bye wart! can also be used by diabetics.

## Dosage and use

Bye wart! is only intended for external treatment.

- Massage the cream in well and allow it to be absorbed. Do this at least 3 x per day.
- Repeat the treatment until the wart has completely disappeared.
- For stubborn wart (for example on the feet), the wart can be covered with air-tight tape after the product has been massaged in.

If necessary, you can use Bye wart! for an extended period. Use the product on a daily basis at the location of the wart. If, after 1 week of treatment, no change can be seen, we advise you to contact your GP.

## Which side effects may be caused by using Bye wart!?

Until now, we have not been made aware of any side effects caused as long as Bye wart! is used correctly.

## Interaction with other remedies

Non known so far.

## Storage

Store at room temperature and protect from high temperatures. Store out of the reach of children. Bye wart! can be used until the use-by date given on the packaging. After opening, do not use after 6 months!

## Composition

Dimethicone, Prunus amygdalus dulcis, Melaleuca alternifolia, Ureum, essential oils (Lavandula officinalis, Citrus medica limonum, Pelargonium capitatum, Thuya occidentalis, Oleum cinnamomi ceylanicae), Capsicum annuum, Aqua, Ethanol, Polymeric sulfonic acid, Natrium benzoate, Kalium sorbate, Citric acid.

## How do the ingredients in Bye wart! work?

Dimethicon forms a protective film over the wart and this prevents re-infection. It also makes the skin soft and elastic and ensures that the etheric oils can do their job as effectively as possible. It also has a waterproof function.

Due to its water-bonding properties, urea is one of the most important, natural moisture retention substances in the skin. It can also loosen hard skin and, in this way, ensures that warts disappear.

The etheric oils in Bye wart! each have their own way of influencing the removal of warts. They regulate the moisture level of the skin, (e.g. almond oil), reduce skin irritation that is caused by the infection (e.g. geranium oil), are cleansing, antiseptic and encourage blood flow (e.g. tea tree oil, lemon oil and thuya oil). The also encourage skin repair and limit scar formation (geranium oil).

Bye wart! is available as a cream in a 15 ml tube.

**Distribution UK: Eurosales International Ltd., Dublin - IRE**

**Production: ATP AG, Switzerland**

Bye wart! is a CE product, medical aid class 1.

Instructions' publication: June 2008.
